

# Download Cellular Respiration Quiz And Answers

Photosynthesis is the process through which plants take in carbon dioxide and re-introduce oxygen to the atmosphere. This process uses sunlight energy and turns it into chemical energy that assists in cellular respiration. Fill in all the gaps, then press "Check" to check your answers. Use the "Hint" button to get a free letter if an answer is giving you trouble. Aerobic cellular respiration is the process in which our cells break down food and turn it into energy that cells need to perform their life functions. Respiration has two definitions. In biology it means the process the process through which nutrients are converted into useful energy in a cell of an organism.
