Results in Fixed Point Theory and Applications(RFPTA) is an open access journal for publishing the highest quality research papers in the traditional areas of the Fixed Point Theory and Applications. In mathematics, a fixed-point theorem is a result saying that a function F will have at least one fixed point (a point x for which $F(x) = x$), under some conditions on F that can be stated in general terms. Results of this kind are amongst the most generally useful in mathematics. In mathematics, a fixed point (sometimes shortened to fixpoint, also known as an invariant point) of a function is an element of the function's domain that is mapped to itself by the function. Advances in Fixed Point Theory (AFPT) is a peer-reviewed open access international journal, which is aimed to provide a publication forum for important research in different areas of current interest covering all aspects of fixed point theory and their techniques applicable to nonlinear analysis, geometry, game theory, mathematical economics ...
